Lovely Professional University, Phagwara

INTRODUCTION

The Project Toil.com is a website which deals with the problems faced by every common man. Problems such as finding the suitable labor for the job. Wonder you are facing problem of pipe leakage at your home what will you do? You will be needing a right plumber who should be available instantly and cost you a reasonable price for the service. To solve this problem, toil helps you to find the ideal server who is nearest to you with who will cost you the right price too. The website deals with many servicing avenues such as Plumbing, Carpentry, Electric, Pest control, House Projects etc.

At the other toil provides the enrollment to the unemployed servers, who can join and can be their own boss. All they have to do is to register themselves to toil via toil member and they will be directly getting the work by the customer itself through toil. The money will be directly given to the service provider and for every service toil will take 23% commission.

Content and Modules:

The site will have three Front ends.

1. User side:

This is basically the customer side from which customer can request the service they want.

This side will have the list of services through which the customer can choose the ideal one.

It will also have the OTP authentication for the user and live location and much more.

2. Service Provider Side:

This will be the side from which the service provider (eg. Plumber) will accept the customer request and can see his live location to reach him.

It will have a login form and enrolled service provider and login in it

3. Enrollment Side:

This will be the side through which the Service provider can enroll into toil by a toil official.

It will have a login page for the toil official and a signup page too.

The signup of the service provider can only be done by the toil official through this end.

Contribution:

As the group has 4 members the team will work in 2-2 members team on the all three sides.

User side will be developed by Ashutosh Khajuria and Anurag Mishra

Enrollment side will be developed by Aman Srivastava and Abhishek Hatwar with Ashutosh's help for creating forms.

The Service provider side will be developed by all four members.

Ashutosh Khajuria:

1. Idea and planning:

The whole idea was of his and the working of the project is been planned by him too.

2. User Side: contribution in making the following side.

3. Forms creation: some of the login and signup forms will be created by him.

4. Service Provider side: contribution in making the following side.

Anurag Mishra:

1. Service Provider side: contribution in making the following side.

2. User Side: contribution in making the following side.

Aman Srivastava:

1. Service Provider side: contribution in making the following side.

2. Enrollment Side: contribution in making the following side.

Abhishek Hatwar:

- 1. Service Provider side:** contribution in making the following side.
- 2. Enrollment Side:** contribution in making the following side.
